

Blackstone Alternative Multi-Strategy Fund (BXMIX)

As of August 31, 2015

Investment approach

Blackstone Alternative Multi-Strategy Fund's ("Fund") investment objective is to seek capital appreciation. The Fund seeks this objective by allocating its assets among a variety of nontraditional or "alternative" investment strategies. Blackstone will allocate the Fund's assets among investment sub-advisers with experience managing alternative investment strategies and among investment funds. It may also manage a portion of the Fund's assets directly.

Fund highlights

Fund assets ⁶	\$2,617 million
Inception date	June 16, 2014
Investment adviser	Blackstone Alternative Investment Advisors, LLC
Eligible investors	US taxable & tax-exempt

1. Performance is presented through August 31, 2015. Net performance is net of the Gross Expense Ratio less waived expenses. Performance data quoted represents past performance and does not guarantee future results. All ITD statistics above are calculated using daily performance. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance data quoted. BXMIX launched on June 16, 2014 and has a limited performance record. Additional information and current performance data is available at www.blackstone.com/bxmix.

The firm

Blackstone is a large and diversified alternative asset manager, with

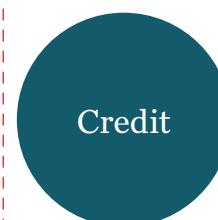

\$333B

in assets under management.⁹

Blackstone is the largest discretionary allocator to hedge funds in the world, with over

\$68B

in assets under management.^{8,9}

* The investment minimum is waived for clients of a financial intermediary, broker-dealer, financial institution, or registered investment advisor that invest in the Fund through an omnibus account.

2. Indices are unmanaged and investors cannot invest in an index. Please see end of document for additional disclosures regarding indices presented.

3. Inception to Date (ITD) statistics are as of BXMIX's inception on June 16, 2014.

4. Measures beta of BXMIX to the respective index.

5. Measures alpha of BXMIX to the respective index.

6. As of August 31, 2015.

7. Net expense ratio consists of the total expense ratio, as reflected in the Fund's prospectus adjusted to reflect any fee waiver/expense reimbursement and excluding interest and dividends on securities sold short, acquired fund fees and expenses not subject to the expense cap. Through May 31, 2016, Blackstone Alternative Investment Advisors LLC has contractually agreed to waive its fees and/or reimburse expenses of the Fund so that certain of the Fund's expenses, together with the Fund's management fees, will not exceed 2.40% annualized for Class I shares.

*Manager name may be a short form name of the legal name of each sub-adviser. The list of sub-advisers and target allocations above is subject to change. Please check the prospectus for the most up-to-date list of sub-advisers. Sub-strategy allocations exclude exposures to Fund level cash, hedging and expenses and are adjusted pro-rata to equal 100%.

Blackstone Senfina Advisors L.L.C. "Senfina" is an indirect wholly-owned subsidiary of The Blackstone Group L.P., a publicly traded master limited partnership that has units that trade on the New York Stock Exchange under the symbol "BX." Senfina is an affiliate of BAIA, the Fund's investment adviser, on the basis that it is under common control with BAIA. The investment by BXMIX with Senfina benefits Blackstone and a withdrawal from Senfina would be detrimental to Blackstone.

1. Performance is presented through August 31, 2015. Net performance is net of the Gross Expense Ratio less waived expenses. Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance data quoted. BXMIX launched on June 16, 2014 and thus performance for June 2014 is limited to June 16 through June 30.

All investors should consider the investment objectives, risks, charges and expenses of BXMIX, Class I carefully before investing. The prospectus and, if available, the summary prospectus contain this and other information about BXMIX and are available on BXMIX's website at www.blackstone.com/bxmix. All investors are urged to carefully read the prospectus and, if available, the summary prospectus in its entirety before investing.

Beta: A measure of the volatility, or systemic risk, of a security or a portfolio in comparison to the market as a whole. **Volatility/Standard Deviation:** A measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Standard deviation is calculated as the square root of variance. **Sharpe Ratio:** A ratio to measure risk-adjusted performance. The Sharpe ratio is calculated by subtracting the risk-free rate - such as that of the 10-year U.S. Treasury bond - from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been. **Alpha:** A risk-adjusted performance measure that represents the average return on a portfolio over and above that predicted by the capital asset pricing model (CAPM), given the portfolio's beta and the average market return.

Glossary of Indices

Market indices obtained through Bloomberg. Indices are unmanaged and investors cannot invest in an index. The volatility of the indices presented may be materially different from that of the performance of BXMIX. In addition, the indices employ different investment guidelines and criteria than BXMIX; as a result, the holdings in BXMIX may differ significantly from the securities that comprise the indices. The performance of the indices has not been selected to represent an appropriate benchmark to compare to the performance of BXMIX, but rather is disclosed to allow for comparison of BXMIX's performance to that of well-known and widely recognized indices. In the case of equity indices, performance of the indices reflects the reinvestment of dividends. **Barclays Aggregate Bond Index:** covers the USD-denominated, investment-grade, fixed-rate, taxable bond market of SEC-registered securities. The index includes government securities, mortgage-backed securities, asset-backed securities and corporate securities all with a maturity of greater than one year. **HFRX Global Hedge Fund Index:** designed to be representative of the overall composition of the hedge fund universe. It is comprised of all eligible hedge fund strategies, including but not limited to convertible arbitrage, distressed securities, equity hedge, equity market neutral, event driven, macro, merger arbitrage, and relative value arbitrage. The strategies are asset weighted based on the distribution of assets in the hedge fund industry.

Important Risks

An investment in BXMIX, Class I should be considered a speculative investment that entails substantial risks; you may lose part or all of your investment or your investment may not perform as well as other investments. BXMIX's investments involve special risks including, but not limited to, loss of all or a significant portion of the investment due to leveraging, short-selling, or other speculative practices, lack of liquidity and volatility of returns. The following is a summary description of certain additional principal

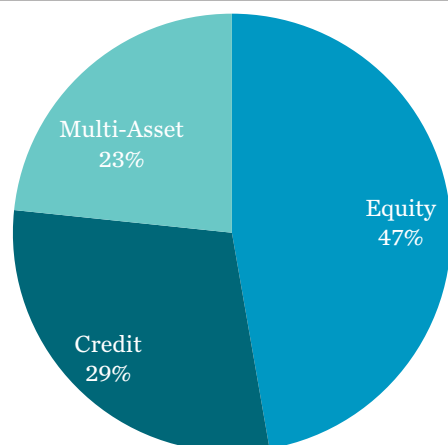

risks of investing in BXMIX: **Allocation Risk** - Blackstone's judgment about the attractiveness, value or market trends affecting a particular asset class, investment style, sub-adviser or security may be incorrect and this may have a negative impact upon performance. **Derivatives Risk** - the use of derivatives involves the risk that their value may not move as expected relative to the value of the relevant underlying assets, rates, or indices. Derivatives can be subject to counterparty credit risk and may entail investment exposure greater than their notional amount. **Distressed Securities Risk** - investments in securities of business enterprises involved in workouts, liquidations, reorganizations, bankruptcies and similar situations involve a high degree of risk of loss since there is typically substantial uncertainty concerning the outcome of such situations. **Event-Driven Trading Risk** - involves the risk that the specific event identified may not occur as anticipated and that this may have a negative impact upon the market price of the securities involved. **Foreign Investments/ Emerging Markets Risk** - involves special risks caused by foreign political, social and economic factors, including exposure to currency fluctuations, less liquidity, less developed and less efficient trading markets, political instability and less developed legal and auditing standards. **High Portfolio Turnover Risk** - active trading of securities can increase transaction costs (thus lowering performance) and taxable distributions. **Model and Technology Risk** - involves the risk that model-based strategies, data gathering systems, order execution and trade allocation systems and risk management systems may not be successful on an ongoing basis or could contain errors, omissions, imperfections or malfunctions. **Multi-Manager Risk** - managers may make investment decisions which conflict with each other and as a result, the Fund could incur transaction costs without accomplishing any net investment result.

Performance commentary

The investment objective of Blackstone Alternative Multi-Strategy Fund (the “Fund”) is to seek capital appreciation. The Fund aims to achieve its objective by allocating assets among a variety of investment sub-advisers with experience managing non-traditional or “alternative” investment strategies. In August, the Fund’s Class I share class returned -1.04% net of fees and expenses versus -6.03% and -6.58% for the S&P 500 and MSCI World, respectively, and -0.14% for the Barclays U.S. Aggregate Bond Index.

August proved to be one of the most volatile months for global markets in years, with domestic and foreign equities, emerging market currencies and commodities all experiencing sharp price swings as investors struggled to digest the impact of a slowdown in China. Many investors were caught off guard by China’s decision to devalue its currency toward the beginning of the month, which amplified worries about a slowdown in the economy that has been one of the drivers of global growth over the past several decades. The People’s Bank of China (“PBOC”) communicated that the move was intended to loosen the Chinese government’s grip on its financial system and allow the Yuan’s exchange rate to be set by market forces. However, this decision caused investors to pull capital out of China and other emerging markets in search of safer assets, inducing a sell-off across both developed and emerging markets. Resulting policy reactions as well as positive economic data out of the U.S. helped equity markets muster a partial rally, with global equity indices regaining a portion of the losses experienced earlier in the month. This partial rally was fairly short lived, however, as equity markets experienced additional selling pressure toward the end of the month, ending August down anywhere between 6% and 12%.

Equity:

As investors generally painted equity markets red in August, the Fund’s Equity Market Neutral strategies provided positive, uncorrelated returns amidst heightened volatility. Positive returns in these strategies were driven largely by fundamental stock picking on the long and short sides of the portfolio, resulting in strong alpha production. The Fund has been rotating capital out of more directional strategies and into more market neutral exposures over the past several quarters due to our view on equity valuations and our outlook for non-directional alpha potential. These rotations benefited the Fund in August and largely offset the negative performance of the Equity Long/Short strategies that, although hedged, do have a directional beta component. While there was some alpha in Equity Long/Short, the beta component outweighed the alpha and resulted in negative performance for this strategy group for the month. From a sector perspective, short positions in healthcare, technology and retail were accretive to performance while long REITs and financials exposures were net detractors.

Credit:

Credit strategies as a whole finished August slightly down, although performance was mixed at the sub-strategy level. Our more tactically oriented high yield strategies were able to navigate the environment well, with Fixed Income – Corporate strategies adding positive performance in a month where high yield indices were generally down close to 2% as represented by the JPMorgan Domestic High Yield Index. Certain derivative-based hedge positions also augmented returns in August, helping mitigate downside. However, within other sub-strategies mark-to-market losses driven by exposures in oil-related companies and government sponsored entity (“GSE”) credit risk transfer positions weighed on performance and resulted in negative monthly returns for Distressed/Restructuring and Fixed Income – Asset Backed strategies.

Multi-Asset:

A challenging market environment in August translated into mixed results for Multi-Asset strategies, which as a category ended the month in negative territory. Discretionary – Thematic strategies finished the month in positive territory despite prevailing emerging market headwinds and negative news out of China. The positive performance was primarily driven by Greece and Argentina sovereign trades, while corporate exposures in Russia and Brazil detracted from performance. The Fund’s Multi-Strategy strategies’ defensive bias coupled with outperformance in several idiosyncratic positions helped protect the portfolio in August and produced positive returns for the month. However, other Multi-Asset sub-strategies did not fare as well and offset these positive returns, leading to the negative performance for the category. Exposure to developed market equities was the largest performance detractor, in addition to commodities exposure in our more systematic strategies, as oil and other related commodities sold off in August. On the whole, Multi-Asset sub-advisers maintained core positions and added incrementally amidst the volatility with the view that fundamentals remain largely unchanged.

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance data quoted. Disclosure information

All investors should consider the investment objectives, risks, charges and expenses of BXMIX carefully before investing. The prospectus and, if available, the summary prospectus contain this and other information about BXMIX and are available on BXMIX's website at www.blackstone.com/bxmixon. All investors are urged to carefully read the prospectus and, if available, the summary prospectus in its entirety before investing. Additional information regarding BXMIX is available upon request.

Important Disclosures Regarding Exposure

Exposure data presented herein does not consider the impact of delta on option positions (unless noted otherwise). Instead, exposures represent the market value of each underlying instrument. Positions of unknown type (if any) are excluded from exposure data.

There is no attempt in this report to differentiate between or adjust for shorter versus longer duration rates trades. Instead, they are shown only by market value of exposure. Given that exposure data is based on fund holdings, it excludes unsettled trades. Position level data is obtained from State Street Bank and Trust Company, the administrator for BXMIX. Blackstone does not guarantee the accuracy of such data.

Glossary of Terms:

Gross Exposure: Reflects the aggregate of long and short investment positions in relation to the net asset value. For example, if BXMIX has 60% long exposure and 50% short exposure to a particular asset class, then BXMIX has 110% gross exposure to that asset class. The gross exposure is one indication of the level of leverage in a portfolio. **Net Exposure:** This is the difference between long and short investment positions in relation to the net asset value. For example, if BXMIX has 60% long exposure and 50% short exposure to a particular asset class, then BXMIX is 10% net exposure to that asset class. **Long:** A long position occurs when an individual owns securities. **Short:** Short selling a security not actually owned at the time of sale. Short positions can also generate returns when the price of a security declines. **VaR:** A statistical technique used to measure and quantify the level of financial risk within a firm or investment portfolio over a specific time frame. **Value at risk** is used by risk managers in order to measure and control the level of risk which the firm undertakes. The risk manager's job is to ensure that risks are not taken beyond the level at which the firm can absorb the losses of a probable worst outcome. **DV01:** A bond valuation calculation showing the dollar value of a one basis point change in interest rates or yield. **Alpha:** A risk-adjusted performance measure that represents the average return on a portfolio over and above that predicted by the capital asset pricing model (CAPM), given the portfolio's beta and the average market return.

Glossary of Indices

Market indices obtained through Bloomberg. Indices are unmanaged and investors cannot invest in an index. The volatility of the indices presented may be materially different from that of the performance of BXMIX. In addition, the indices employ different investment guidelines and criteria than BXMIX; as a result, the holdings in BXMIX may differ significantly from the securities that comprise the indices. The performance of the indices has not been selected to represent an appropriate benchmark to compare to the performance of BXMIX, but rather is disclosed to allow for comparison of BXMIX's performance to that of well-known and widely recognized indices. In the case of equity indices, performance of the indices reflects the reinvestment of dividends.

S&P 500 Total Return Index: market capitalization-weighted index that includes 500 stocks representing all major industries. Returns are denominated in U.S. dollars and include dividends. The index is a proxy of the performance of the broad U.S. economy through changes in aggregate market value.

MSCI World Index: A market capitalization weighted index designed to provide a broad measure of equity-market performance throughout the world. The MSCI World is maintained by Morgan Stanley Capital International, and is comprised of stocks from all the developed markets in the world.

Barclays Aggregate Bond Index: covers the USD-denominated, investment-grade, fixed-rate, taxable bond market of SEC-registered securities. The index includes government securities, mortgage-backed securities, asset-backed securities and corporate securities all with a maturity of greater than one year.

JPMorgan Domestic High Yield Index: is designed to mirror the investable universe of the U.S. dollar domestic high yield corporate debt market.

Important Risks

An investment in BXMIX should be considered a speculative investment that entails substantial risks; you may lose part or all of your investment or your investment may not perform as well as other investments. BXMIX's investments involve special risks including, but not limited to, loss of all or a significant portion of the investment due to leveraging, short-selling, or other speculative practices, lack of liquidity and volatility of returns. The

following is a summary description of certain additional principal risks of investing in BXMIX:

Allocation Risk – Blackstone's judgment about the attractiveness, value or market trends affecting a particular asset class, investment style, subadviser or security may be incorrect and this may have a negative impact upon performance.

Derivatives Risk – the use of derivatives involves the risk that their value may not move as expected relative to the value of the relevant underlying assets, rates, or indices. Derivatives can be subject to counterparty credit risk and may entail investment exposure greater than their notional amount.

Distressed Securities Risk – investments in securities of business enterprises involved in workouts, liquidations, reorganizations, bankruptcies and similar situations involve a high degree of risk of loss since there is typically substantial uncertainty concerning the outcome of such situations.

Event-Driven Trading Risk – involves the risk that the specific event identified may not occur as anticipated and that this may have a negative impact upon the market price of the securities involved.

Foreign Investments/ Emerging Markets Risk – involves special risks caused by foreign political, social and economic factors, including exposure to currency fluctuations, less liquidity, less developed and less efficient trading markets, political instability and less developed legal and auditing standards.

High Portfolio Turnover Risk – active trading of securities can increase transaction costs (thus lowering performance) and taxable distributions.

Model and Technology Risk – involves the risk that model-based strategies, data gathering systems, order execution and trade allocation systems and risk management systems may not be successful on an ongoing basis or could contain errors, omissions, imperfections or malfunctions.

Multi-Manager Risk – managers may make investment decisions which conflict with each other and as a result, the Fund could incur transaction costs without accomplishing any net investment result.
